Projector Program

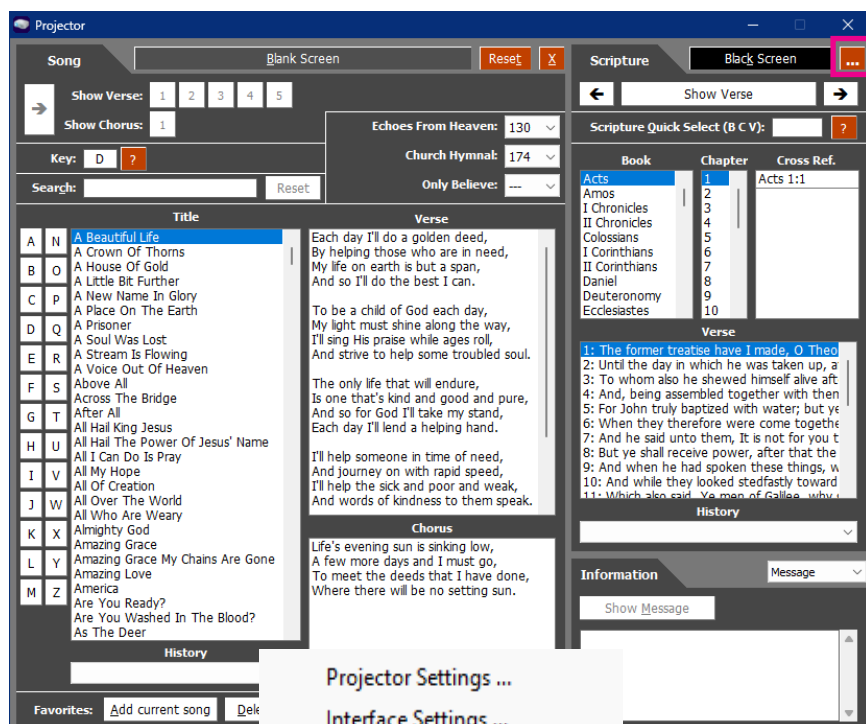

Introduction

The video projection program (called “program” from here on) allows you to display song verses and choruses, Scriptures, and messages on the video display screen in the sanctuary. It is designed for speed in selecting what will be displayed.

Program Window

Main Window

This is the appearance of the projector program main window. Notice the button in the top right corner of the program window outlined in purple below. This is the menu button. Clicking this button will display all of the menu options as shown in the lower image.

Initial Projector Settings

Setting Up The Projector - Initial Run

The screen below appears the first time the program runs, and it controls everything relating to the projector. On the initial run of the program, the most important settings are the computer display parameters and the projector display parameters.

The resolution of the monitor must be set before the program will operate properly. Right-click the computer's desktop, then: click the 'Settings' tab (in Windows XP), "Screen Resolution" (in Windows Vista or 7), or "Display Settings (in Windows 8 or 10). The computer monitor must be configured as Monitor #1, and projector monitor must be configured as Monitor #2. In addition, the desktop must be extended onto monitor #2. Make a note of the resolutions of both monitors. Close the control panel applet before continuing.

Click the *Test Projector Position Settings* button and go to the next page.

Fade Delay (ms) Between Steps

50

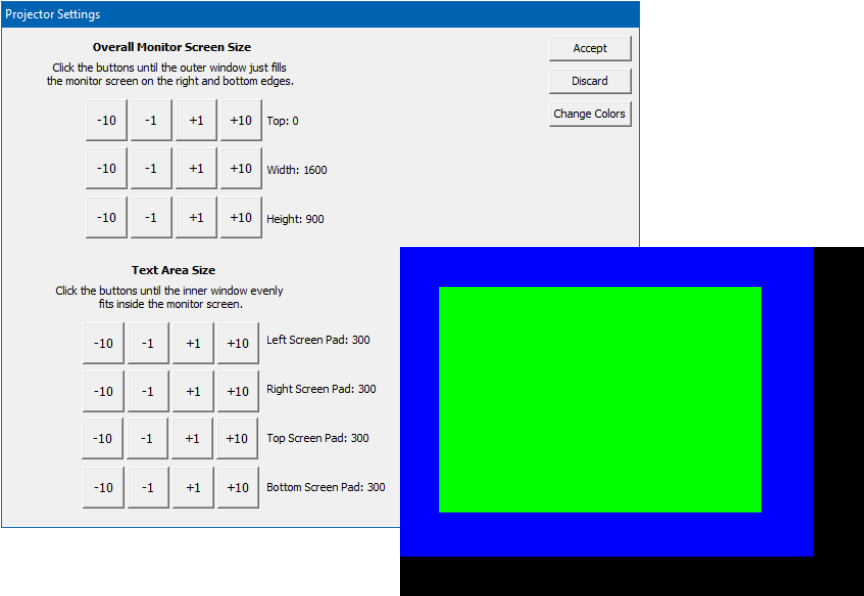

Acceleration Of Fade Steps

10

High numbers gives slower fades.
Lower numbers give smoother but slower fades.

If you weren't able to determine the resolution of the projector, click the *Top Edge*, *Right Edge* and *Bottom Edge* buttons to expand and/or contract the projector width and height. You want to completely cover the projector with the test screen (the blue/green area of the image shown below).

The four settings for padding (*Top screen pad*, *Bottom screen pad*, *Left screen pad*, and *Right screen pad*) allow the words on the projector to be moved closer or further away from the edges. The settings for top and bottom can be negative to move them even closer to the edges. In this case, you want the green area centered horizontally and vertically on the screen with some margin on all four sides.

Once you have the test pattern sized and positioned, click the *Accept* button to continue. Finally, click *File > Accept And Close* in the Projector Settings window. All of the other settings in the Projector Settings window can be changed later.

Initial Interface Settings

Setting Up The Program - Initial Run

The screen below appears the first time the program runs, and it adjusts the colors used in the main program window. You can choose between several predefined themes, or design your own color scheme. Click the *File > Apply Changes And Close* menu to continue. You can return to this screen later to make more changes.

Overview

Quick-Start Information

The previous pages dealt with the screens that appear the first time you run the projector program. This page will give you an overview of using the program.

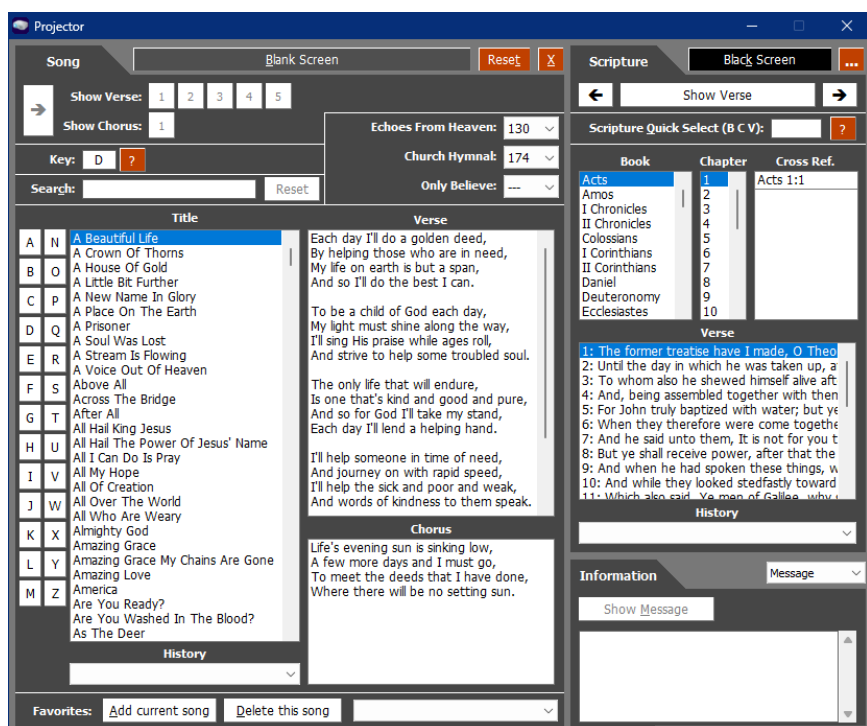

The main window is divided into three panels: **Song**, **Scripture**, and **Information**. You can interact with all three panel at all times; however, only one panel at a time can update the projector display. The active panel is the section that can change the projector's display, and is referred to as the *active panel*. The other panels cannot change the projector's display. You switch from panel to panel by clicking the button above each panel. Notice that clicking one of these buttons does not update the projector's display.

The projector font size is automatically reduced to ensure all of the text fits on the projector screen.

There are control panels to adjust the program settings, projector settings, to make additions and corrections to the songs, update the event calendar, add/remove verses to the Scripture rotation, and to view online help. These panels are available on the main menu, which is available by clicking the menu button.

The *Blank Screen* button clears the projector screen of all text, leaving only the background image.

The *Black Screen* button, if visible, clears the projector screen to black, removing the background image (if visible).

Song Panel

Selecting And Displaying Lyrics

The Song panel (shown on the next page) allows you to select and display songs. Notice that even if the panel is disabled, you can do everything described in this section except change what's displayed on the projector display. You can only change the display when the panel is active. To make the panel active, click the *Song* tab at the top of the panel.

Before you display a song, you need to select the song. There are several ways to locate a song:

1) If the song leader gives you the page number from one of the hymnals, click in the box next to that hymnal, scroll to the page number and click on the number.

2) Click on a letter key on the left edge of the song panel to jump to the first song that starts with that letter. Now scroll through the list until you find the song title. Click on the song title to select the song without changing the song on the display, or double-click the title to display the first verse (if the song has one) or the first chorus (if the song has no verses).

3) Click in the box next to the *Search* label, then start typing either the song title, a few words from the song, or the song number. As you type, the search list shows you all songs that match your search. Double-click on the song you want, or click the *Reset* button or press the *Esc* key to try again. Double-clicking in this case does not change the song on the display; it only selects the song that can be displayed.

4) The history box at the bottom of the panel lists all of the songs that have been displayed. Clicking on any of these songs selects the song. This comes in handy when a song leader alternates between two or more songs.

5) If there are some songs that are used over and over, you can click the *Add current song* button in the 'Favorites' area to add them to the drop down list. This makes finding these songs easier. (If you no longer want a song in the favorites, click the song in the favorites, then click the *Delete this song* button.)

Notice that even though a song is selected, it is not on the screen (unless noted otherwise above). That's where the other buttons come into play.

When the song panel is active, the buttons described below are active; otherwise, they are not.

The song panel has up to fourteen buttons for showing verses, up to six buttons for showing choruses, and one button (with an arrow on it) for stepping sequentially through the song. When you click a button with a number on it, that item is displayed on the screen. The button with the arrow will display verses and choruses in alternating fashion, which is how most songs are sung. If the song leader wants to repeat a verse or chorus, you can click on that button. Finally, you can click on the words of the verses or choruses themselves to display those words.

If *Song key* is visible, then you can update the key in which the song is performed. Just type it in and press the Enter key to save the change. Click the? button for key help.

If you want to quickly edit a song, Shift-Click that song title (press and hold the Shift key, then click the song title). The song opens up in a text editor. Make your changes and save. This technique is designated mainly to change the length of lyrics. If you need to correct the spelling or any other type of editing, you should do this from the Song Update window.

Title

Verse

Each day I'll do a golden deed,
By helping those who are in need,
My life on earth is but a span,
And so I'll do the best I can.

To be a child of God each day,
My light must shine along the way,
I'll sing His praise while ages roll,
And strive to help some troubled soul.

The only life that will endure,
Is one that's kind and good and pure,
And so for God I'll take my stand,
Each day I'll lend a helping hand.

I'll help someone in time of need,
And journey on with rapid speed,
I'll help the sick and poor and weak,
And words of kindness to them speak.

Chorus

Life's evening sun is sinking low,
A few more days and I must go,
To meet the deeds that I have done,
Where there will be no setting sun.

Favorites: Add current song Delete this song

Scripture Panel

Selecting And Displaying Scripture

The Scripture panel (shown below) allows you to select and display Scripture verses. Notice that even if the panel is disabled, you can do everything described in this section except change the projector display. You can only change the display when the panel is active. To make the panel active, click the *Scripture* tab at the top of the panel.

Before you display a Scripture, you need to select the Scripture.

- 1) Click on the book of the Bible.
- 2) Click on the chapter of the Bible.

3) Click on the verse.

Notice that even though the Scripture is selected, it is not on the screen. That's where the rest of the buttons come into play.

When the Scripture panel is active, the buttons described below are active; otherwise, they are not.

The Scripture panel has one button for showing the verse, and two buttons (with arrows on them) for displaying the previous and next verse. The *Show Verse* button shows the selected verse on the display. The button with the left pointing arrow displays the previous verse, and the button with the right pointing arrow displays the next verse.

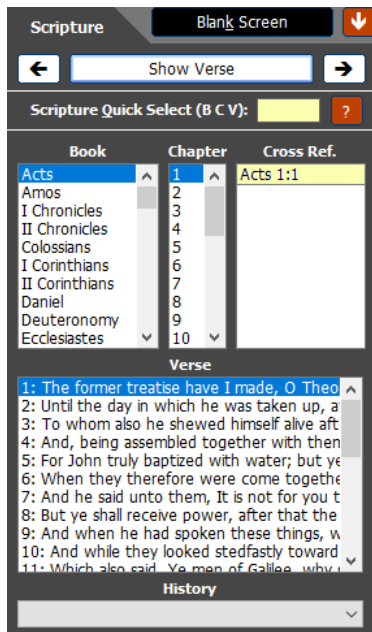

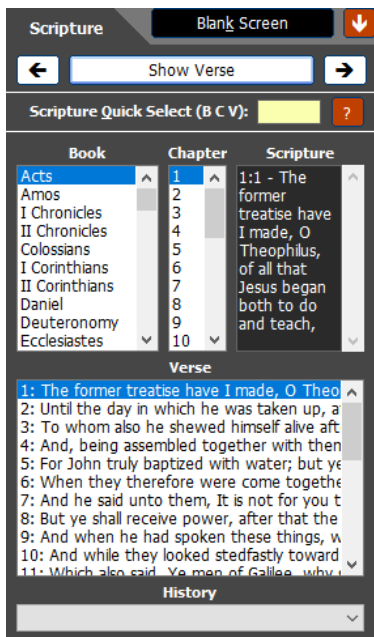

There is a field next to the *Scripture Quick Select (B C V)* button. With practice, this allows you to quickly show any verse. To start, click in the text area. Type in enough of the book's name (without any spaces) to uniquely identify it (the field changes color when this happens), then press the space bar, type in the chapter number, press the space bar, and type in the verse number, then press the enter key. The selected verse is displayed. For a complete list of book abbreviations, click the *?* button on the screen.

The History list shows you all of the Scriptures that have been displayed. Double-clicking a verse displays that verse.

If you want to add a Scripture verse to the history list, Shift-Click the verse. This is useful if a minister gives you a list of verses that he will be using. You can add all of the verses to the history box prior to the start of service.

If you Shift-Click the word 'Verse' that is over the verse list, you will add that Scripture to the Scripture rotation list. To remove Scriptures, or to save a list of Scriptures for future use, click the menu button and select *Scripture Rotation*.

If *Show cross references* is enabled in *Interface Settings*, the window on the right appears. Clicking on a cross reference displays the reference. You must click the scripture above the references to return to normal scripture operation. Double-clicking a cross reference verse makes it the current verse and exits the cross reference mode.

Information Panel

Entering And Displaying Messages

The Information panel (the upper pictures on the next page) allow you to: Type in announcements, prayer requests, etc. for the congregation to see; display the event calendar; and display a rotation of Scriptures. Notice that even if the panel is disabled, you can change the message that will be displayed. You can only update the projector when the panel is active. To make the panel active, click the *Information* tab at the top of the panel. You select between messages, events, and Scripture using the drop-down list to the right of the *Information* tab.

Messages/Prayers: Messages and prayers work identically. Before you display a message, select *Message* from the drop-down list. You then can type in your message by clicking in the box in the Message panel and typing it in.

Notice that even though the message has been entered, it is not on the screen. When you activate the Information panel by clicking the *Information* tab, you can click the *Show Message* button to display the message.

Events: Before you display the events, select *Events* from the drop-down list. Clicking the *Show Events* button displays the events one by one. The number of days into the future the calendar displays is set in the **Projector Settings** panel as *Event Display Span*. Clicking the *Skip* button advances to the next event. You can display a specific event by clicking on it in the list beneath the buttons.

Verses: Before you display the verses, select *Verse* from the drop-down list. Clicking the *Show Verses* button starts the Scripture rotation.

If you want to pause the event rotation or the Scripture rotation, click the *Pause* button, which then changes its name to *Resume*. Clicking the *Resume* button continues the rotation.

The length that each event or Scripture is shown is set in the **Projector Settings** panel as *Rotation Display Time*.

To add, modify, import, or delete events, click the **Event Calendar** item on the main menu. The middle picture on the next page then appears.

Click the *New Event* button to add a new event. Select the date from the Event Date picker, and enter the description of the event in the Event Text field or click on a recurring event.

To change an event, first click an existing event in the main window, and then click the *Change Event* button. Select the date from the Event Date picker, and enter the description of the event in the Event Text field or click on a recurring event. Click the *Save Event* button to keep your changes, or the *Don't Save* button to discard your changes.

To delete an event, first click an existing event in the main window, and then click the *Remove Event* button to delete the selected event. (The program automatically deletes an event when it is out of date.)

To import a list of events, click the *Import* button and follow the directions.

To create a group of recurring events, click the *Periodic* button and follow the directions.

To manage the Scriptures that are shown in rotation, click the **Scripture Rotation** item on the main menu. The lower picture on the next page then appears.

The current group of Scriptures can be saved as a new theme by clicking the *Save This Theme* button and giving it a new name.

To load in an existing theme, click the *Load In A Theme* button and select an existing theme.

To create a new theme, click the *Create A New Theme* button, then decide whether to include the existing Scriptures in your new theme or not.

You can randomize the list of Scriptures, or move a Scripture up or down in the list, or delete a Scripture by clicking the appropriate buttons. Any changes are saved automatically.

To add Scriptures to the existing theme, you must be in the main Projector window. In the Scripture tab, locate and click on a Scripture you want to add, then Ctrl-Click the gray Scripture window. That Scripture has been added to the current theme.

Projector Settings

Customizing The Projector Display

This screen is accessible by clicking the menu button and selecting *Projector Settings*. This window is shown on the next page.

The settings for *Computer Display Parameters* and *Projector Display Parameters* were set the first time you ran this program. The only time you would make changes here would be if you installed a different projector, or installed a different computer monitor, or you want to change the margins on the projector screen.

Other Settings

Rotation display time sets how long each rotation item is shown before the next one is shown. Enter the display time in seconds.

Event time span limits how far into the future the event calendar will display the events.

On Startup Show determines what the program displays when it first starts.

Startup Delay will pause the program to allow time for multiple monitors to power up. If not needed, set to 0 min.

Text Settings

Set Font lets you select the font style and size for the projector display. This font is used for scriptures, songs, and information. The title that appears above the main text will be italic if the main text is not, and it will not be italic if the main text is italic.

Set Color sets the projector font color.

Text shadow on text turns on or off the drop shadow.

Set Color sets the projector font shadow color.

Shadow Offset controls how far the drop shadow is from the main text.

Window Settings

Set Color sets the color for the projector background. This is the color of the screen when there is no background image visible.

Import Images allows you to select images for use as backgrounds.

Set Image selects which image to use as the background.

Clear Image removes the background image.

Auto load background image on start selects the image used the last time the program ran as the image to show on the first screen on the projector.

Test Projection Screen Appearance button refreshes the projection screens. You can preview your changes this way.

Use single monitor to practice allows the program to simulate having a second screen.

Transition Settings

Fade all turns on or off the fading transitions between screens.

Fade only transitions to blank/black turns on or off the transitions to a blank or black screen. All other transitions are turned off

The *Fade Delay (ms) Between Steps* inserts a time delay between each step of the fading process. Higher numbers give slower fades; lower numbers give faster fades. If the fades are too fast, increase this setting.

The *Acceleration Of Fade Steps* changes the number of steps in the fading process. Larger numbers result in a faster fade but with more abrupt transitions.

At the top of the window is the menu.

File > Save & Exit saves your changes and closes the window.

File > Apply saves and applies your changes, but leaves the window open so you can make more changes.

File > Reset reverses any changes you made prior to clicking the *Save & Exit* button.

File > Reset All resets all settings back to the settings used when the program first ran.

File > Cancel & Close discards any changes made after clicking the *Save & Exit* button and closes the window.

Interface Settings

Customizing The Interface Appearance

This screen is accessible by clicking the menu button and selecting *Interface Settings*. This allows you can make several visual adjustments to the interface, or the main program window.

You can change the size of the text on the projector control panel by sliding the *Font Size* fader. Not all text is resized, however. This does not change the size of the text on the projector screen.

There are several predefined color themes. Click any one as a starting point. You can use any of them as is, or make changes as you see fit. If you want to save the current colors as a theme, then click the *Save* button and give it a name. You can also delete a theme by clicking on it, then clicking the *Delete* button. Note: The themes that end in \$ cannot be deleted.

The colors of the areas of the projector program screen are grouped according to function. Most areas have a foreground or text color and a background color. Click the appropriate button to change that color.

Active Tab Color changes the color of the tab that is controlling the projector.

Inactive Tab Color changes the color of the other two tabs that are not controlling the projector.

Current Button changes the color of the button in the Song tab indicating what part of the song is currently on the screen.

Played Button changes the colors of the verse buttons in the Song tab to indicate which verses have been displayed.

Other Buttons changes the background colors of these specific buttons.

Active Button: All other buttons besides the buttons that can be colorized individually.

Blank Button: The button that blanks the projection screen.

Black Button: The button that covers the projection screen in black.

Information Button: The button that shows song keys and book abbreviations.

Text Areas: Changes the colors of the text in all lists and type-in boxes.

Search Areas: Changes the colors of the search window and the verse window.

Typing Areas: Changes the colors in the areas where you can type.

Form Color: Changes the color of program window.

Show the 'Black Screen' button, when checked, allows the screen to be set to total black.

Automatically scroll to top of lists, when checked, will scroll the selected item in the song title list and the Scripture book, chapter, and verse lists to the top of the list.

Show tool tips will show the tool tips if checked or hide them if unchecked.

Show cross references will enable a listing of cross references for each scripture as you display it.

Save window position when exiting, when checked, will cause the program to remember its current position on the screen. If checked, then the option *Move to upper left corner* is enabled. If this is checked, the projector program window will be moved to the upper left corner of the display when you click the 'Save & Close' button.

The menu items at the top of the window perform these functions:

Apply saves the changes and returns you to the main program window.

Reset discards any changes but keeps the Interface Setting window open.

Cancel discards any changes and returns you to the main program window.

Manage Songs

Add/Modify/Delete Songs Or Import Songs

This screen is accessible by clicking the menu button and selecting *Manage Songs*. The main page appears as seen below.

To add a new song, click *File* then *Songs* then *New*. The top-left window on the next page appears. Enter all of the information, song verses and chorus, then click the *Save* button. To discard your changes, click the *Discard* button.

To modify a song, first click on the song title to update, then click *File* then *Songs* then *Modify*. The top-right window on the next page appears. Make any changes necessary. To save, click the *Save* button. To discard your changes, click the *Discard* button.

The help screen for both New and Modified songs appears on the next page beneath the main New and Modify screens.

To delete a song, click on the song title to delete, then click *File* then *Songs* then *Delete*, and confirm your choice.

If you want to create the songs on another computer and bring them to the projector computer, follow the guide lines in the bottom help window on page 18. Save your songs on a flash drive, then click *File* then *Songs* then *Import* and follow the directions.

Clicking *File* then *Refresh* will rebuild the song database. This will correct any errors.

When you are finished, click *File* then *Close*.

Song Verses

1. Each day I'll do a golden deed,
By helping those who are in need,
My life on earth is but a span,
And so I'll do the best I can.

2. To be a child of God each day,
My light must shine along the way,
I'll sing His praise while ages roll,
And strive to help some troubled soul.

3. The only life that will endure,
Is one that's kind and good and pure,
And so for God I'll take my stand,

Song Chorus

Life's evening sun is sinking low,
A few more days and I must go,
To meet the deeds that I have done,
Where there will be no setting sun.

New/Modify Song

Song With Verse And Chorus

More Precious Than Silver

I Lord You are more precious than silver,
Lord You are more costly than gold,
Lord You are more beautiful than diamond,
and nothing I desire compares with You.

Chorus: Who can make the of knowing You,
Who can judge the words of who You are,
Lord, who can come the blessings of knowing You,
Who can say just how great You are,
How great you are.

Song With No Verses

Singl Down The Rain

Chorus: Send down the rain, Lord,
Send down the rain, Lord,
Send down the latter rain, ran, ran,
Send down the rain, Lord,
Send down the rain, Lord,
Send down the latter rain.

When I Look Into Your Holiness

1. When I Look into Your Holiness,
When I gaze into Your loveliness,
When all things that surround become shadows,
In the light of You.

2. When I've found the joy of reaching Your heart,
When my will become enthroned in Your love,
When all things that surround become shadows,
In the light of You.

Chorus #1: I worship You I worship You
The reason I live is to worship You.

Chorus #2: We worship You we worship You
The reason we live is to worship You.

Please follow the patterns shown when typing in a new song
or modifying an existing song.

The first line must be the title of the song.

Each verse must start with a number followed by a period.

If there is only one chorus, it must start with Chorus: If there
are more than one chorus, each one must start with Chorus
#:1.

In addition, there can be a 'verse' 0. This is used to give
instructions to the computer user regarding special
circumstances for this song. For example, it might be:
0. Song Order: V1 V2 C V3 V4 C

Song With Verse And Chorus

More Precious Than Silver

I Lord You are more precious than silver,
Lord You are more costly than gold,
Lord You are more beautiful than diamond,
and nothing I desire compares with You.

Chorus: Who can make the of knowing You,
Who can judge the words of who You are,
Lord, who can come the blessings of knowing You,
Who can say just how great You are,
How great you are.

Song With No Verses

Singl Down The Rain

Chorus: Send down the rain, Lord,
Send down the rain, Lord,
Send down the latter rain, ran, ran,
Send down the rain, Lord,
Send down the rain, Lord,
Send down the latter rain.

When I Look Into Your Holiness

1. When I Look into Your Holiness,
When I gaze into Your loveliness,
When all things that surround become shadows,
In the light of You.

2. When I've found the joy of reaching Your heart,
When my will become enthroned in Your love,
When all things that surround become shadows,
In the light of You.

Chorus #1: I worship You I worship You
The reason I live is to worship You.

Chorus #2: We worship You we worship You
The reason we live is to worship You.

Please follow the patterns shown when creating a new song to
import into the program.

The first line must be the title of the song.

Each verse must start with a number followed by a period.

If there is only one chorus, it must start with Chorus: If there
are more than one chorus, each one must start with Chorus
#:1.

In addition, there can be a 'verse' 0. This is used to give
instructions to the computer user regarding special
circumstances for this song. For example, it might be:
0. Song Order: V1 V2 C V3 V4 C

Manage Hymnals

Manage Hymnal Names And Colors

This screen is accessible by clicking the menu button and selecting *Manage Hymnals*. This allows you to name the hymnals, control which hymnals are shown on the control panel, and other settings as seen in the top image on the page. Click the *Save* button to save your changes, or click the *Discard* button to discard your changes. Click *Hymnals* then *Close* to return to the projector program.].

The screenshot shows a window titled "Hymnals" with a dark blue header. Below the header is a "File" menu. The main area contains settings for three hymnals, each with a "Name" field and two checkboxes: "Show numbers for this book in the song tab" and "Show song numbers for this book on projector".

File

- ☒ Record song usage log file
- ☐ Show numbers on projection screen
- [View Song Usage Log Files](#)

Echoes From Heaven

Name:

- ☐ Show song numbers for this book on projector

Hard Cover Hymnal

Name:

- ☒ Show numbers for this book in the song tab
- ☐ Show song numbers for this book on projector

Soft Cover Hymnal

Name:

- ☒ Show numbers for this book in the song tab
- ☐ Show song numbers for this book on projector

Display Text

Display Text That You Type

Clicking the menu button and selecting *Display Text* brings up a window where you can type any text you want to display on the projector. There are two areas you can type: The title, and the body. The functions of the buttons are as follows:

- 1) Type the title into the title box, or if you have copied the title to the clipboard, then press the 'Paste Into Title' button. Click 'Erase Title' to erase it.
- 2) Type the body into the body box, or if you have copied the body to the clipboard, then press the 'Paste Into Body' button. Click 'Erase Body' to erase it.
- 3) When you are ready to display the text, click the 'Show Text' button.
- 4) When you want to hide the text, click the 'Blank Screen' button.
- 5) Click the 'Erase All' button to clear both the title and the body.
- 6) Click the 'Close' button to return to the main program.

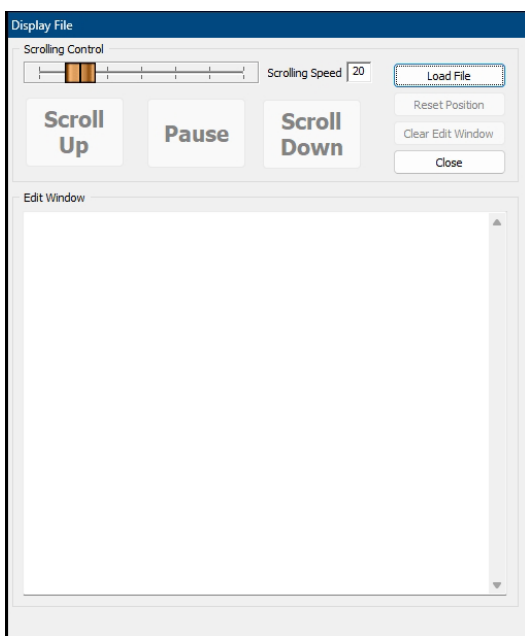

The screenshot shows a window titled "Display Text" with a dark blue header. Inside, there are two main sections: "Title" and "Body". The "Title" section has a text input field and buttons for "Erase All", "Paste Into Title", "Erase Title", and "Close". The "Body" section has a larger text input field with a vertical scrollbar and buttons for "Paste Into Body" and "Erase Body". To the right of the "Body" input field are two large buttons: "Show Text" and "Blank Screen".

Display File

Display Text That You Have In A File

Clicking the menu button and selecting *Display File* brings up a window where you can select a file to display on the monitor. Load a file by clicking File -> Open. After loading the file, the functions of the buttons are as follows:

- 1) Scroll Up: Start the text scrolling up the screen.
- 2) Scroll Down: Reverses the text scrolling.
- 3) Pause: Pauses the scrolling.
- 4) Scrolling Control: Adjusts the speed of the scrolling.
- 5) Reset: Starts scrolling from the beginning.
- 6) Erase: Clears the scrolling window.
- 7) Close: Returns to the normal projection screen.
- 8) Edit window: You can edit and type in the Edit Window if you need to add or correct the text. You can save your changes by clicking File -> Save.

Disable

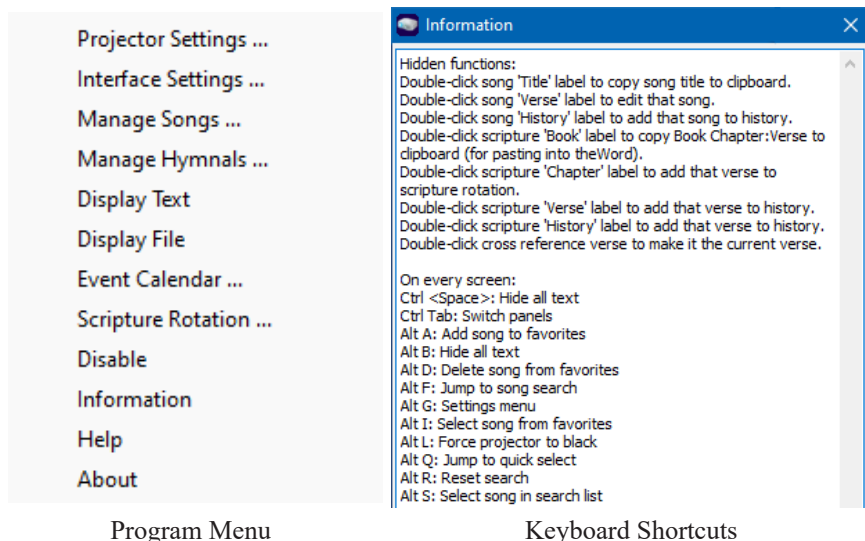

Hide The Projection Window

Clicking the menu button and selecting *Disable* hides the projection window, leaving it free for other uses, such as playing a DVD or showing another program on the display. The Projector program is still running. To return control of the display to the program, click the menu button and select *Enable*.

Tips And Suggestions

Things To Consider

- 1) A cluttered or busy background image makes the text hard to read.
- 2) If you want to design your own backgrounds, make them the same size as the projector screen. For example, if the projector screen resolution is 1024 pixels x 768 pixels in size, make your graphics that size.
- 3) Any images that you import will be stretched, if necessary, to fill the projector screen. This may make some images look odd.
- 4) The best font for the projector is Calibri Bold.
- 5) The title line and the tag line are italic if the font specified for the projector is not italic. If the font specified for the projector is italic, then the title line and tag line are not italic.
- 6) The *Fade Delay (ms) Between Steps* and *Acceleration Of Fade Steps* allow you to fine-tune the screen transitions. The faster the acceleration, the jerkier the fades look. The lower the acceleration, the smoother the transitions look. If the transitions are too fast, decrease the acceleration. If they are still too fast, then increase the delay. Conversely, if the transitions are too slow, first decrease the delay. If the transitions are still too slow, then increase the acceleration. If you wish to turn off transitions altogether, then un-check *Fade screen transitions*.
- 7) There are several shortcut keys that you can use. You can view them by clicking the menu button and selecting *Information*.
- 8) You can move the mouse into the projector window; however, you won't see a mouse pointer when that happens. The best way to get the mouse pointer back is move the mouse up and then to the left. The mouse pointer should reappear on the computer monitor.
- 9) The message box is useful for relaying messages from the nursery or the parking lot (announcing someone's windows are down and it's starting to rain, for example).
- 10) And perhaps the biggest tip of all: Just close the projector program and use the projector to display anything your computer can display. Just drag the window from the main window to the projector window.
